**College Admission Essay for the Electrical Technology Program, Michigan State
University**

The reason to why I decided to apply for this Electrical Technology program is due to my interest and passion for electronics. Personally, I interact with electric devices on a daily basis since I have a long line of family members pursuing careers in the same field. For instance, my brother runs an electronic shop just a few meters from home and my elder sister is an associate in some solar power firm within the region.

I have heard several experiences with electronics, and for that reason, I believe I am fully prepared to excel in this particular program and the general field of electricity as well. As a part-time job, I have always accompanied my elder sister in her affiliate Solar Energy and Power Distribution Firm and helped in installing, troubleshooting and repairing power circuits. Since I am yet to advance my skills and knowledge in the field, I am not in a position to create some electronic gadgets which is my dream. Sometimes when I am at home, I help my brother in managing his electronic shop, where I sometimes sell and other times do repairs, mostly phone and computer repairs.

If I successfully manage to enroll for this particular program, then I am confident that my future concerning electronics will be captivating. Michigan State University reputation on technical courses has been overwhelming, and I suppose this is the place for me. Maybe with these new skills added to my knowledge on the same, I will partner with a computer science

expert and develop a more sophisticated Artificial Intelligence machine, robot, than the existing ones. Despite my gender, I believe we are all, both boys and girls, entitled to pursue careers our field of interests.
